## ZAC's Cartoner and Case Packer Adds the Perfect Topping to Pizza Lines

Arlington Heights, IL, May 29, 2007: Z Automation's pizza cartoner and case packer offers a complete solution for end of line packaging needs for pizza applications. The flexibility of this combination provides clients with the most streamlined turn-key operation that provides the highest productivity at the lowest operating cost. The servo driven system is user friendly and offers quicker changeovers with less tweaking and maintenance. The stainless steel balcony GMP design allows for a clean wash down system while also providing easy access for tool-less changeovers.

By being modular in both the mechanical and electrical design, the system is easily configurable and this allows a more efficient construction of the machine while reducing the build cycle. Providing an integrated solution permits a small footprint and combines versatility with performance and ease of operation. Key features of this system include ZAC's patented "Carry-In" feature, which eliminates maintenance intensive barrel cams, and the patented dynamic product bucket that adjusts to various product sizes, eliminating the need for change parts. In keeping with the versatility of the system, the case packer accommodates both vertical and horizontal configurations and has the ability to pack the pizza cartons in either trays or cases.

For additional information on this system or any of our other products, please contact us at [info@zautomation.com](mailto:info@zautomation.com) or visit [www.zautomation.com](http://www.zautomation.com).

**About Z Automation Company, Inc.** - Founded in 1996, Z Automation has quickly committed to set new standards in the areas of design, inventive solutions and craftsmanship. A member of Packaging Machinery Manufacturers Institute (PMMI), ZAC provides effective solutions to both simple and complex customer requirements by expanding beyond conventional methods of automation.
