ZAC ROBOTIC CASE PACKER, CP15 24RI, IS THE NEXT GENERATION IN MODULAR CASE LOADING EQUIPMENT

Arlington Heights, IL: *Z Automation Company* is pleased to introduce the latest innovation in flexible case loading, with the **CP15 24RI**, a **Robotic Case Packing System**. This machine takes flexible case packing to a whole new level by building on its innovative robotic product handling and flexibility while employing line buffering in the system. The use of the dual robotic cells combined with ZAC's innovative design offers end users with a versatile end of line solution for case packing a wide range of products.

ZAC's dual robotic case packing system serves two main functions:

- 1) Infeed design provides product line dividing and collation with the capability of accomplishing multiple patterns for carton stacking configurations and
- 2) it functions as a product buffering system preventing line stoppages of primary equipment when downstream equipment goes down.

This Gen III servo controlled system is user friendly and offers fast changeovers in ten minutes or less with minimal tweaking or adjustments, and is completed without tools. By combining this system with the latest advances in packaging automation, it allows the system to be modular in both the mechanical and electrical design.

For additional information on this system or any of our other products, please contact us at **zac@zautomation.com** or visit us at **www.zautomation.com**.

About Z Automation Company, Inc. – Founded in 1992, Z Automation specializes in providing packaging solutions for both simple and complex customer requirements by expanding beyond conventional methods of automation. A member of Packaging Machinery Manufacturers Institute (PMMI), ZAC is committed to setting new standards in the areas of modular design, innovative solutions, and craftsmanship.

For more information on the CP15 24RI , please call Kim Magon, marketing manager at 847.483.0120 /x218 or send us an e-mail at **zac@zautomation.com**. Please include your specific application information if available.
